

# Converting Numbers to Images for Memorization

by Lew Toulmin

September 2017

The images below use my modification of the “Major System,” in which numbers are converted to letters and sounds, as follows:

0 = S or Z or H (remember this by 0 = Zero)

1 = T (1 looks like a T)

2 = N (2 looks like an N on its side)

3 = M (3 looks like an M on its side)

4 = R (4 looks like an R, if you add an extra leg)

5 = L (5 is like a crumpled up L)

6 = J or G (imagine a 6 with a J hanging off the bottom, forming a hurricane symbol)

7 = K or C (7 with another 7 shape added to its upper right corner looks like K)

8 = F (an 8 written cursively looks like a lower case f)

9 = B (imagine a 9 upside down, it = a 6)

Under this system, the number 44 is converted to **RR**, then vowels are added to make a memorable word and image, like **RaRe** meat. 19 is **TB**, which is converted to **TuB**. In my system, the interior vowel is “a” whenever possible. The images and numbers below can be printed and cut out to create flash cards for study.

Happy memorizing!
